

Unify Multi-Cloud Operations Without the Headaches

Build, deploy and run on the cloud best suited to each app, while maintaining consistent operations across different deployment environments.

Every enterprise craves flexibility. While building a multi-cloud strategy can achieve this, it can often lead to **increased complexity from differing cloud semantics and APIs, security models and management environments.**

VMware Cloud delivers services designed to make multi-cloud manageable, allowing you to leverage any cloud to meet the needs of any app. Rather than threatening efficiency, cost or security, you can optimize them, protecting your data and intellectual property from vendor lock-in.

Our offering is uniquely focused on driving consistent operations, simplifying the highest priority technical challenges your enterprise faces in managing multiple clouds.

Benefits of unifying multi-cloud operations with VMware Cloud

Visibility across clouds

Protect the privacy of your workloads

App and infrastructure security

Flexibility across clouds

Understand and optimize cloud costs

Optimize resource usage

“We’ve been using CloudHealth to manage our AWS spend with reporting, optimization, and Reserved Instance management for several years. Now that we’re also leveraging the data center components, CloudHealth provides us with a consolidated view of our hybrid environment within a single pane of glass.”

How to Operate Multiple Clouds Without Multi-Cloud Complexity

VMware Cloud Services unify operations across cloud environments, allowing you to expand your scope and innovate freely.

Better manage the cost of cloud operations

Simplify budget tracking and spending analysis to reduce waste and lower overall costs in the cloud.

Learn how **CloudHealth** can help.

Simplify multi-cloud resource and app management

Leverage a common approach across clouds for resource provisioning and app troubleshooting, to drive greater efficiency and business responsiveness.

Learn how **VMware Cloud Assembly** and **Wavefront by VMware** can help.

Improve cloud security and compliance

Automate infrastructure security and compliance monitoring across your multi-cloud footprint, ensuring apps meet mandatory operating, industry and regulatory configuration requirements.

Learn how **VMware Secure State** can help.
